TECH STACK

- Acquisition: Trino, SparkSQL, HiveSQL, NoSQL, TiDB, ClickHouse, Redis, Neo4j, GraphQL, PromQL, Cypher, KQL, DuneSQL, Kafka, Flink, API/SDK, Etherscan, Nansen, Glassnode, Atlas
- Processing: Python, R, Julia, Rust, Go, VBA, SAS, JupyterLab, DuckDB, Pipeline (Dagster, Airflow), DataFlow, dbt
- Analytical Framework: Conversion Funnel/RFM, Lifecycle, Multivariate Analysis, RCA, Predictive Modelling, Tokenomics, MEV
- Visualization: Tableau, PowerBI, Superset, Looker, Redash, Kibana, Grafana, Datawind, Qlikview, Automated report (Jinja)
- Collaboration: GitLab, Databricks, Docker, Continuous Deployment, Agile Development, Jira, Code Review, Async Collaboration
- Soft Power: Business Acumen, Stakeholder Management, Problem-solving, Storytelling, Multilingual, AI Agent

EXPERIENCE

SENIOR DATA ANALYST – BYBIT

Fulltime in Dubai, UAE

Mar. 2024 – Jul. 2026

- Products: Developed 46 automated marketing dashboards on Datawind. Leveraging real-time stream processing to integrate multi-source data (from Database, GA4, Firebase, AppsFlyer, offline lists, etc.), built a real-time user profiling system and campaign tracking dashboard, increasing signup conversion rate by 2.7% and reducing CPA (the core matrix of ads ROI) by 6.3%.
- Services: Implemented a self-service user behavior analytics framework that automated the processing of Sensor front-end data (views, dwell time, clicks, churn, funnel, page jumps). Enabled PM, Ops, and Livestream Teams to conduct independent analysis, accelerating decision cycles by 80% and supporting 100+ cross-departmental data requests, directly optimizing annual marketing budgets by 15% and driving Q4 OKR.
- Business Support: Averaged 26 in-depth reports per quarter. Primarily included: multi-dimension breakdown and drill-down of ROI metric fluctuations, attribution of signup/eftd/cpa/arpv7/ltv cvr rate bottlenecks, summaries of annual large-scale campaign performance, historical campaign rankings by feature, correlation analysis between ad costs and social media performance, comparison of registration efficiency across different page modules, investigation of CTA component conversion attributes.
- Data-driven Decision: Contributed to setting core margin targets for marketing, calculated QoQ growth rates and market trends to provide forecasts for the next quarter and support senior management to establish achievable targets. The workflow is deployed as an AirFlow DAG, enabling automated iterative execution of quarterly forecasts and self-monitoring of prediction errors.

BUSINESS INTELLIGENCE ANALYST – NOVADAX

Fulltime in Beijing Focus on Brazil

Jun. 2021 – Mar. 2024

- Products: Constructed and optimized Grafana/Dune dashboards and framework, tracking and monitoring over 200 metrics.
- Services: Automated crypto-trading and on-chain data reports, diminishing processing time from 2hrs to 20mins.
- Business Support: Measured ad channel ROI using Google Analytics API, decreasing customer acquisition cost by 11.5%. Utilized LTV forecasting to evaluate airdrop campaigns, increasing transaction cvr rate by 6% averagely.
- Data-driven Decision: Developed a user risk-score framework and quantified user behavior in global compliance direction, reducing overall risk score by 9.5%. Proposed keyword triggers in customer service integration, cutting complaint rates by 32%.

Strategy Analyst, Growth – BlueFocus Internship in Shanghai

Dec. 2020 – Apr. 2021

Business Analyst, E-Commerce – Estee Lauder Internship in Shanghai

Aug. 2020 – Dec. 2020

Operation Analyst, Operation – JD Internship in Beijing

Nov. 2019 – Aug. 2020

PROJECT

DeFi Arbitrage Path Discovery

VIZ

Jul. 2026

- Engineered an ETL pipeline using Web3.py to extract real-time Uniswap V2 liquidity reserves, modeled assets and trading pairs as a graph database using Neo4j, and implemented Cypher multi-step traversal queries, discovering a 0.14% profit margin on market.

Comprehensive Analysis of Sales Data

Kaggle Competition

Dec. 2023

- Analyzed cosmetics sales data using python, implementing RFM segmentation, Sankey-based cvr analysis, and basket analysis. Developed probabilistic models to predict LTV, driving a 50% improvement in operational efficiency and 8% enhance on retention.

Sentiment Analysis for Dissertation

NLP

Jun. 2021

- Conducted web crawling on unstructured data, performing cleaning, exploratory analysis, and text processing. Applied topic modeling and sentiment scoring to analyze 1M reviews, identifying key insights and generating visualizations like word clouds.

EDUCATION

Dalian University of Technology

Top20 in China

– Bachelor of Internet Digital Economy

Jun. 2021

Majors: Java(93'), Python(94'), C++, Database, Data Structure, Algorithms, Statistics, Business Analysis, Consumer Psychology.

Google Data Analysis/Advanced Data Analysis/Business Intelligence/Data Science Certificate
